

TWINSIDE

Twinside Precast Concrete Retaining Walls Retaining Walls for the Homeowner

Twinside Precast Concrete Products have been manufacturing and supplying quality retaining wall systems since the 1980's. We have consistently met or exceeded Australian standards whilst not compromising on our professional service and reliable quality along the way.

Our commitment to the use of robust, quality materials, durable finishes, reliability and pleasing aesthetics ensures an excellent solution to the home owner and DIY handyman alike, whatever the location and design requirements.

Designed not to fade or warp, Twinside retaining walls are termite resistant and unaffected by weather conditions making them an ideal solution for any location. We can supply to all Perth metropolitan locations as well as throughout the state.

Twinside can cater for all requirements whether it be supply and installation or simply provision of material for the DIY handyman to self install.

Our wall system is uniquely designed in such a way to ensure that installation is simple! Please visit our website to download comprehensive yet easy to follow installation instructions: www.twinside.com.au

Product Specifications

Twinside retaining walls are product engineered to exceed Australian standards. Our panels are 60mm thick and contain steel reinforcing in accordance with AS 4671. All concrete exceeds 40Mpa. The posts are also reinforced with steel in accordance with this standard. Retaining walls up to 1500mm high with concrete posts, higher walls require steel posts that are always galvanised to stop rusting.

All steel reinforcing is hot dip galvanised when installation is within 5 kilometres of the coast, also in accordance with Australian standards.

Twinside will coordinate the provision of engineering drawings should planning approval be required, and will liaise with the regulatory bodies to ensure that necessary approvals are obtained with minimum delays.

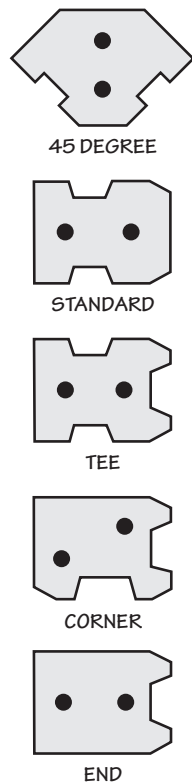

Twinside Precast Concrete Retaining Walls

Retaining Walls for the Homeowner

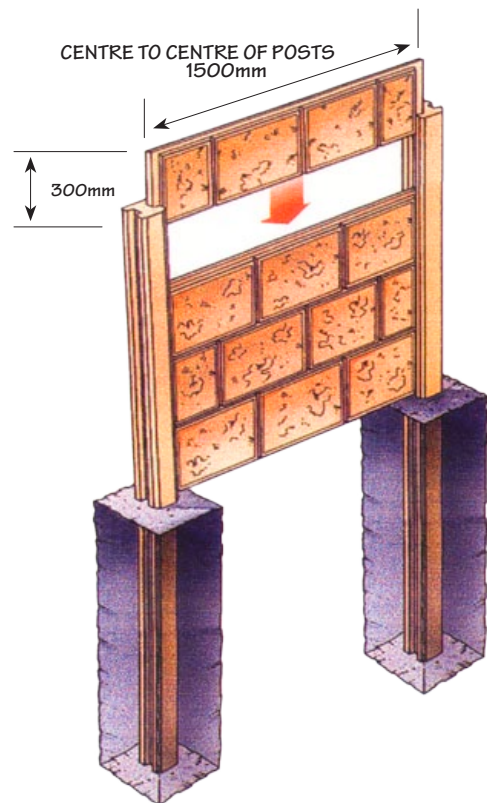

Why Twinside?
